

Cycle Hubs for Transport Interchanges

Macemain + Amstad specialise in the design and manufacture of cycle parking solutions for the rail industry

A statement Cycle Hub for GWR at Didcot Parkway Interchange

Macemain + Amstad has worked in partnership with GWR to provide bespoke cycle hubs offering safe secure storage for 600 cycles at Didcot Parkway Interchange and 360 cycles at Newbury Station.

The cycle hubs delivered two-tier cycle parking (gas assisted lift); accommodation for non-standard cycles; pump and repair maintenance stations; seating; LED lighting; integrated CCTV; future proofed design to accommodate e-bike charging points and entrance framing for the inclusion of automated door mechanisms.

The incorporation of GWR corporate branding delivers design continuity across their facilities.

Design Flexibility

Macemain delivers modular and scalable cycle hubs which are designed to suit specific locations and meet customer specifications. Small or large scale, we have a cycle parking solution to suit all environments and budgets.

Working in partnership with our clients we provide a complete turnkey solution from design through to manufacture and installation.

All cycle hubs ensure ease of maintenance and safety and may include a wide range of sustainable materials and product options including but not limited to: solid and/or toughened

and laminated glazing; cedar timber cladding with fire retardant specification; mild steel (galvanised) and aluminium polyester powder coated; stainless steel; integral drainage management; LED lighting with solar or mains power options; traditional steel or sedum living roof options.

Enhancing the local environment

The combination of attractive practical designs using sustainable materials ensures these cycle parking solutions contribute to the enhancement and aesthetics of transport interchanges, while improving the rail passenger experience.

Growth in public transport commuting provides the opportunity for the rail industry to shape the major entrance ways into our cities, towns and rural communities through attractive and thoughtful design.
